

# PROTECT Uninterruptible Power Supplies and Surge Protection

for Data & IT applications

Date 2011

PERFECT IN FORM AND FUNCTION

**AEG**

# The right UPS for every application.

AEG Power Solutions provides customized solutions for protection against network disruptions and the loss of data and costly downtime periods suffered as a result.

## "Plug & Safe" options

Our range of compact UPS systems includes UPS devices for private use, systems which can be incorporated into racks for the IT cabinet and "Plug & Safe" parallel switchable modular UPS systems for computer centers and industry.

## Product support

As a renowned and experienced company, AEG Power Solutions is there to support you by providing easily expandable products, reliable delivery and offering trade-oriented support and service packages.

## Our group and global experience

AEG Power Solutions is a world leading provider of premium power electronics. Since September 2009, the group is a listed company through its holding company 3W Power holding SA. It offers one of the world's most comprehensive product and service portfolios in power conversion and control, for customers spanning the infrastructure markets of energy, telecom, lighting, transportation, general industrial, as well as new energies sectors. Since 2005, the company has developed a full range of products for the solar energy industry, from solar inverters to turnkey solutions and is investing in solutions that will enable distributed power generation and smart micro-grids.

## Committed to providing peak performance

With more than 250 engineers, technicians and project managers, AEG Power Solutions achieves outstanding results in the field of research and development as well as in application engineering. This really pays off, as more than 70 active patents are currently pending in the power supply sector.

## Milestones

- 2009 AEG Power Solutions becomes a listed company through its holding company 3W Power SA
- 2008 Renaming of Saft Power Systems Group to AEG Power Solutions
- 2005 Saft Power Systems Group becomes independent
- 1998 Saft acquires AEG SVS Power Supply Systems GmbH in Belecke
- 1995 First UPS in the world with 100% digital control system called Protect 3.
- 1988 Development of a UPS with IGBT transistors (single and three phase)
- 1985 First rectifier Profitec S with microprocessor
- 1972 Development of the first switch mode power supply 5/25
- 1969 Development of the power controller
- 1965 Development of the three phase thyristor inverter
- 1961 Development of the single phase thyristor inverter
- 1951 DC supply for the „Deutsche Bundespost“ (German Federal Post Office)
- 1947 Establishment of Saft Power Systems and development of a wide range of innovative battery charging equipment and power supply systems
- 1945 Establishment of the AEG plant in Warstein-Belecke with 25 employees

Protect Home. (GE/FR/UK) \*

Protect A.

600 VA.  
Comprehensive protection for  
satellite, TV, phone, fax or modem.

500 to 1400 VA.  
Protects PCs, workstations and  
phone systems.

Page	18
Power (kVA)	0.6 kVA
Technology acc. to IEC 62040-3	VFD (offline)

## Software "CompuWatch"

Our shutdown and UPS management software "CompuWatch" is provided on CD for all single and three-phase UPS devices

- Storage of system operations and graphical representation of the UPS values
- Definable (shutdown) processes can be triggered in a time or event-controlled manner via shell script
- Event-controlled transmission of messages via e-mail and SMS
- Communication via Novell interface, RS232, network and USB
- Support for all major operating systems
- further information can be found on page 44

\* Available with german, french and UK sockets

### Protect B.

750 to 3000 VA.  
Rack or tower for server and network components  
with sinusoidal output.

22
0.75 - 3 kVA
VI (Line - interactive)

4-44

## UPS topologies:

**VFD**

### VFD - offline

UPS output depends upon supply (mains) voltage and frequency variations  
Advantages: compact dimensions possible; low cost solution

**VI**

### VI - line-interactive

UPS output depends upon supply (mains) frequency variations, but supply voltage are conditioned (independent)  
Advantages: high efficiency, low running costs, extreme wide input voltage

**VFI**

### VFI - online

UPS output is independent of supply (mains) voltage and frequency variations  
Advantages: highest availability, protection against all supply (mains) voltage disturbances; frequency converter mode possible

### Protect C. \*

1 to 10 kVA.  
Tower UPS for sensitive networks,  
small computer centres, Intranet and  
Internet servers.

### Protect C. Rack \*

1 to 6 kVA.  
UPS for rack usage to protect  
sensitive networks, small computer  
centres, Intranet and Internet servers.

## Warranty

Our high standards and decades of experience mean we are also able to offer services which are cost-effective, efficient and quick. For the first 24 months after the initial purchase we provide a comprehensive advanced replacement service for the device and battery from the compact UPS series.

### **36 months warranty on UPS and battery**

Register your UPS within two months from date of purchase and you will get the warranty extension "Pro-Care Garant" for free. So we provide an overall warranty for 36 months on UPS and battery.

The registration form is available at [www.aegpartnernet.com](http://www.aegpartnernet.com)

\* Also available with enhanced battery charger for autonomy times over a period of hours.

### Protect D.

1 to 10 kVA.  
Compact UPS for rack usage protects server, networks and IT equipment.

6-80

## Service and warranty

Additional service packages such as warranty extension up to 60 months are available during the first year after purchasing the UPS. We also recommend the optional maintenance during a long term usage of the UPS to assure reliability in critical situations. Repairs and individual service measures available on request!

### Protect 1.M

4 to 24 kVA.  
Scaleable and modular high-performance UPS system for the IT sector.

### Protect 3.M 2.0

20 to 120 kVA.  
Modular UPS with "hot swappable" design as scalable solution for medium-sized data centers.

Page	34
Power (kVA)	4 – 24 kVA

10 - 120 kVA
VFI (double conversion)
3 ph~/3 ph~
yes
free configurable

Protect 4.33

160 to 1000 kVA.  
High-availability-UPS for all critical applications in facility control systems, data centers, telecommunication, internet nodes, banks and insurances

42
160 - 1000 kVA
VFI (double conversion)
3 ph~/3 ph~
yes
free configurable

## SuperCaps

SuperCaps have the ability to give fast peak power for indefinite cycles, they can be charged or discharged several times and also have a long lifetime up to 20 years. More efficient than conventional batteries, they do not release any heat during discharge and are up to 95% efficient in application. Additionally, they do not require special storage conditions and maintenance for assured operation. Their scalable and modular nature makes SuperCaps a compelling proposition for data center applications.

# When voltage rises ...

**10** YEARS WARRANTY

## Surge protection

Surges can be caused, for example, by lightning striking near your premises. Lightning induces voltage surges in conductors and cables that can damage any connected equipment. Switching in households, with conventional power supplies of fluorescent lamps for example, can also cause surges in the wiring system of a building.

The steadily growing number of electronic household appliances and entertainment units over the last few years has also increased the extent of damage. A single power surge can quickly lead to costly damages amounting to thousands of Euros, as smaller components often have close tolerance limits for the power supplied. If they are damaged, the entire unit has to be repaired. This is often complicated and costly. AEG surge solutions provide effective protection.

The following equipment is particularly at risk:

- Phone systems/router
- Television/LCD and plasma TVs
- Game consoles
- Computer & IT equipment
- TV receiver
- Speakers

## Protect Basic.GE: Effective surge protection for sensitive home electronics

The surge protectors have five outlets for standard grounded power plugs, plus one or two wider-spaced outlets designed to accommodate larger power adapters. The surge protectors include filters to suppress high-frequency interference voltages. To prevent tangled cables, they are also fitted with a cable management bracket at one end.

Two LEDs indicate whether the power is on and surge protection is active. The power switch enables the mains supply to connected equipment to be cut off.

Key features:

- Five grounded outlets plus one or two adapter-spaced outlets
- Power cord (1.8 m) with angled plug
- Resettable automatic circuit breaker
- All outlets are fitted with child locks
- Prepared for wall-mounting
- LEDs indicating operating state and active surge protection
- Surge protection up to 36.000 A & 10 years warranty

Protect Basic.GE7  
Cable fixture avoids  
tangled cables

Part number:

Protect Basic.GE6 # 600 000 7194

Protect Basic.GE7 # 600 000 7196

## Protect Travel: Protection for travelling with additional USB charger

The Protect Travel. provides surge protection in the smallest of spaces. This makes it ideal for travelling or for applications in confined spaces. Often, the power quality in the country of travel is not sufficiently guaranteed. Be on the safe side and protect your laptop, cell phone or digital camera against overvoltage while on the move. With the additional USB charger unit, you save on extra chargers.

Key features:

- 3 surge protected sockets
- 2 USB chargers for cell phones or MP3 players
- Indicator shows active surge protection
- Compact dimensions for travelling
- 90 degrees rotating mains input cord
- Surge protection up to 36.000 A & 10 years warranty

Protect Travel fits perfect  
into travel bags

Part number:

Protect Travel # 600 000 7747

## Protect Office: Compact protection for PC and peripheral equipment

Protect Office. is the compact power distribution for your desktop. The 3 power outlets and network ports provide complete computer protection. During the development phase, the compactness of design was paramount. The design also allows you to connect a microphone and speakers. As a result, the annoying cable clutter on and behind the desk can be avoided. Any peripheral units can be switched off via the central power button thereby reducing standby costs.

Key features:

- 3 protected sockets, one of them rotateable
- 2 protected USB chargers
- Data-line protection for network cable (RJ45)
- Additional connectors for microphone and headset
- audio cable extension included
- Surge protection up to 36.000 A & 10 years warranty

protected audio in- and output;  
audio cable extension (1.8 m) included

2 protected  
USB chargers

network line  
protection (RJ45)

90° rotateable  
earth protected socket

Part number:  
Protect Office # 600 000 7746

## Protect Business: Business solution with surge protection

Protect your laptop and projector at conferences. Thanks to its folding mechanism, Protect Business. is suitable for conference tables and desktops. In addition, it offers surge protection for data cables (RJ45) and a dual USB charger unit.

Key features:

- 6 protected sockets
- Surge protection for network cables (RJ45)
- and 2 protected USB charger
- Foldable mechanism for conference tables
- Dust resistant and childproof sockets
- Surge protection up to 36.000 A & 10 years warranty

2 protected  
USB charger

network line  
protection (RJ45)

foldable mechanism  
for space saving

Part number:  
Protect Business # 600 000 7748

## Protect Entertainment: Intelligent protection for entertainment equipment with Master-Slave-Function

Protect your sensitive equipment and save standby costs. With its Master-Slave-Function, the PROTECT Entertainment. is especially suited to modern home theatres and music systems. If the main unit (master) is turned off, then the electricity supply of the other peripheral units (slaves) will be automatically cut off. In addition, this conductor offers surge protection for antenna cables and network cables. As a result, all your equipment is optimally protected against power surges.

Key features:

- 1 master and 3 slave sockets, master/slave mode can be switched off; adjustable master trigger level
- 2 outlets always powered
- Surge protected antenna connector (coaxial)
- Surge protection for network cables (RJ45)
- Dust resistant and childproof sockets
- Surge protection up to 36.000 A & 10 years warranty

Master-Slave-Function can be switched off, so all outlets are powered

network line protection (RJ45)

surge protected antenna connector

Part number:  
Protect Entertainment # 600 000 7745

## Protect TwinPower: Security for various applications with protected USB chargers

With PROTECT TwinPower., AEG offers you a flexible voltage solution for the desktop. Its 7 power outlets provide enough room for all peripheral devices around the computer. Owing to its two-part design, the connection cables can be flexibly housed. The first part serves as a power supply for the computer, printer and monitor. The other part of the surge protective conductor has a power switch for disconnecting the TwinPower from the network. With this feature, all connected devices do not consume electricity when in standby.

Furthermore, the desk unit has 3 other power sockets. Cell phones and MP3 players can be charged using its two protected USB ports.

Key features:

- Divided surge protector, one part always powered
- Overall 4 + 3 protected sockets
- 2 protected USB chargers
- Easily accessible power switch
- Surge protection up to 36.000 A & 10 years warranty

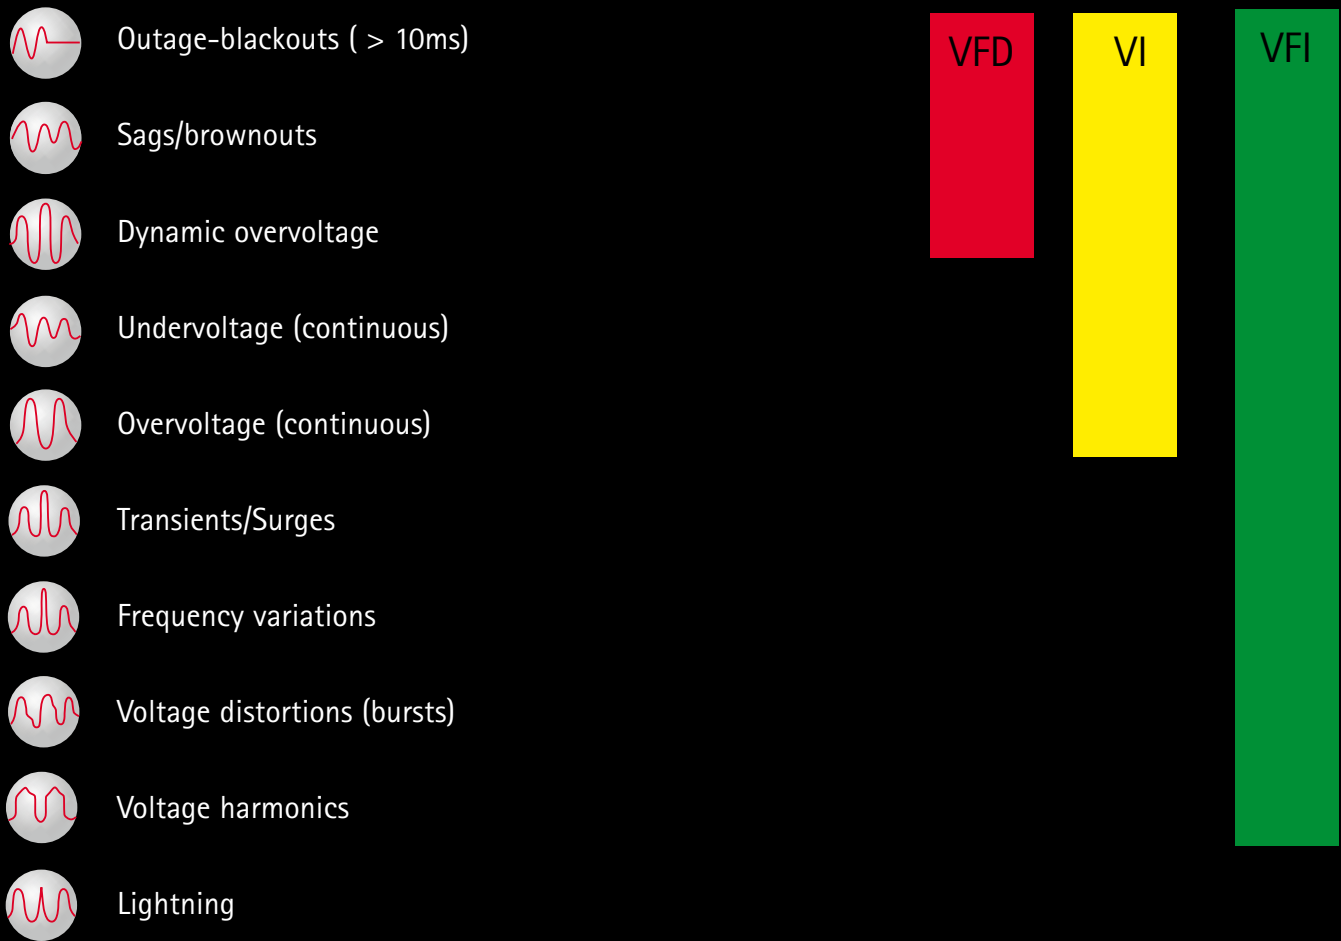

2 protected USB chargers

easily accessible power switch controls both parts of the TwinPower

Part number:  
Protect TwinPower # 600 000 7749

# Optimal protection for every application

## Uninterruptible power supply

Mains voltage variations occur more often than expected. The consequences of this are crashes, loss of data and cost intensive downtimes. The solution is an uninterruptible power supply (UPS) which offers various level of protection.

There are three different UPS topologies offering different protection levels against all 10 types of mains disruption and variation.

The VFD technology protects against the mains variations caused by network disruptions, brownouts and voltage peaks.

The VI technology protects against the most common mains variations. It's a good compromise between protection and costs.

The highly reliable VFI technology offers the best protection against mains disruptions and variations. This technology provides a clean and secure supply of power for all critical applications and sensitive hardware.

**VFD** acc. to IEC 62040-3 (offline)**Advantages:**

- most compact solutions possible
- high efficiency, low running costs
- low cost solutions

**Disadvantages:**

- transfer gap (some ms)
- load is fed by unfiltered voltage (no correction by the inverter)
- output voltage often not sinusoidal

**VI** acc. to IEC 62040-3 (line-interactive)**Advantages:**

- high efficiency low running costs
- extremely wide input voltage
- robust concept

**Disadvantages:**

- transfer gap (some ms)
- AVR control range/inverter transfer
- load is fed by unfiltered voltage (no correction by the inverter)

**VFI** acc. to IEC 62040-3 (online/double conversion)**Advantages:**

- no transfer gap
- protection against all supply (mains) voltage disturbances
- sine-wave input current
- converter mode possible
- internal redundancy by additional bypass

**Disadvantages:**

- lower efficiency in comparison to VI technology
- more cost intensive comparison to VFD technology

# Reliability

## Protect Home: Uninterrupted Protection for PCs

Protection against data loss through uninterrupted power protection with a size from 600 VA, the Protect Home. offers professional and economical protection against power outages, surges and sags.

### Practical Protection

Especially for multi-media applications, the Protect Home. offers data line protection for telephones, faxes and modems as well as surge protection for satellite TV.

Connections are made directly to the UPS outlets. Protect Home. proves itself in critical situations with its high availability due to a sturdy overload and excess voltage protection.

Thanks to its user-friendly battery design Protect Home. emphasizes its remarkable economy.

### Simple Operation

The "One-Board-Design" as well as LED notification provides clear information about the unit's most important operating conditions. With the addition of an audible alarm the user is provided with clear notification of critical events.

### USB and RS232 Connections for Simple Control

The Protect Home. is quickly connected to a USB or RS232 interface. Through the special AEG shutdown software "CompuWatch", which is included, the unit allows you to control the most important operations as well as provides for automatic shutdown during longer power outages.

### Protection against Power Outages and dangerous Power Spikes

- Microprocessor controlled, robust UPS technology for power outages and dangerous power spikes
- Complete CompuWatch-Software, "plug-and-play"
- USB and RS232 interface for overview and control from a PC
- Overvoltage protection for satellite TV's as well as dataline protection for telephones, faxes and modems
- User friendly battery design
- Free 36 months warranty on UPS and battery with advanced replacement service (registration required)

Excellent Provisions: all around protection for satellite TV, Telephones, Faxes or Modems as well as USB and serial connections for communication with your PC.

			600 000 4095	600 000 3921	600 000 4921

## UPS INPUT

Input voltage	220 Vac/230 Vac/240 Vac				
Input voltage range without battery mode	161/184–276 Vac (adjustable)				
Frequency (auto selection)	50 Hz/60 Hz $\pm$ 5 Hz (> 40 Hz generator operation)				
Current consumption (max.)	5 A	8 A	10 A	10 A	16 A

## UPS OUTPUT

Rated output voltage/AVR-technology	220 Vac/230 Vac/240 Vac				
Rated output voltage in battery mode	$\pm$ 5 %				
Frequency in battery mode	50 Hz/60 Hz $\pm$ 0,1 Hz				
Output current (at 230 Vac)	3.2 A	4.3 A	6.5 A	8.7 A	13.0 A
Transfer time at mains outage	2–4 ms (typical), 6 ms max.				
Voltage waveform	sinusoidal				
Overload response at mains operation	110 % for 3 Min./150 % for 200 ms				
Overheat and short-circuit protection	yes	yes	yes	yes	yes

## BATTERY

Type	sealed, maintenance free; hot swappable (from 1500 VA)				
Rated voltage	24 Vdc		48 Vdc		96 Vdc
Autonomy time at rated load	5 min.	5 min.	5 min.	5 min.	5 min.
	-	-	Runtime extension with scalable ext. battery packs		
Overload/deep discharge protection	yes	yes	yes	yes	yes
Recharge time (to 90 % of rated capacity)	3 h	3 h	3 h	3 h	3 h

## COMMUNICATION

Interfaces	USB and RS232 for status and measurement levels, Slot for enhanced communications (pot.-free contacts / SNMP), EPO port for emergency power off				
	Configuration panel for voltage preselection and setting of operating mode				
Shutdown software (on CD)	Included for all typical operating systems (e.g. Windows, Linux, Mac), single licence CompuWatch with a 5 fold network licence				
Failure indicators (acoustical/optical)	Separate LED bar graphs for UPS load and battery capacity, indicators for mains failure, overload, battery discharge, battery replace, failure				

## GENERAL DATA

Audible noise (1 m distance)	< 45 dB (A)

## Protect B. PRO: Efficient protection with innovative

### High level flexibility, intelligent functions

- Modern VI (line-interactive) protection technology with sine wave output voltage
- Lower operating costs by higher efficiency (0.9lag power factor)
- compact construction and variable use due to combination design tower/rack, display rotateable
- robust design: overload capability and short circuit protection
- overvoltage protection (RJ11/RJ45) for phone, fax, modem and network
- configuration directly via multi-language display
- comprehensive display with most important UPS values
- intelligent monitoring with USB- and RS232 interfaces; parallel mode with expansion slot possible
- Free 36 months warranty on UPS and battery with advanced replacement service (registration required)

## Protect C: High performance UPS-system for IT and el

### Reliable technology for your safety

- VFI-topology (double-conversion): Protects against all mains power disturbances
- Microprocessor control/DSP guarantees highest availability
- Sine wave shaped current consumption (High frequency PWM with IGBTs)
- Automatic bypass, additional integrated service bypass at 6 and 10 kVA (tower)
- Redundancy due to n+x configuration at 6 and 10 kVA; increase in power output/safety and availability
- Expansion slot for extension cards SNMP/relay-card/USB/potential free contacts
- Free 36 months warranty on UPS and battery with advanced replacement service (registration required)

### Parallel operations

Protect C. 6000 and C. 10000 are also able to be switched parallel. Demand for greater availability by providing an active redundancy as well as a need for increased output power is met here. The combined power increase in connection with active redundancy can be achieved by the parallel switch having the ability to connect a maximum of 3 devices. The key factors are meeting the highest requirements for safety and availability as well as maintaining a cost efficient implementation.

## Protect C. Rack: High performance UPS-system for IT

Due to true online/double-conversion technology Protect C. is well suited for mission-critical applications such as sensitive networks, small computer centers, Intranet and Internet servers, telecom applications as well as for industrial applications. The Protect C. employs VFI topology to protect loads against all public grid disturbances. On the input side sine wave shape current consumption is achieved for all load conditions. High integrated circuits reduce the number of electric connections and components as well as a robust IGBT module, the result: less and more robust components increasing reliability. An automatic bypass provides security during overload.

## Protect D: Efficient high-performance UPS ideal

### Valuable features and easy control

- VFI topology (online double-conversion): protects against all mains power disturbances
- 20% higher available power by 0.9 lagging power factor
- Increase of efficiency through ECO and ECO+ mode
- Improved battery charging technology for optimal battery lifetime
- Hot-swappable batteries, easy exchange via flip-over cover
- Additional Battery Packs for individual scaling of autonomy times
- Expansion slot for communication cards, parallel operation via RS232/USB and SNMP
- Maximize your rack space as the UPS is only 2U including integrated batteries
- Controllable UPS outlets with innovative lock mechanism, prevents accidental disconnection of connected cables
- Graphical display shows UPS parameters, easy configuration of settings via control panel
- Data logger synchronized to real time clock
- Programmable potential-free contact & EPO switch
- Frequency converter mode
- Free 36 months warranty on UPS and battery with advanced replacement service (registration required)

# Reliability

## Protect 1: Online UPS systems for networks and

- True online UPS including static bypass (double-conversion VFI-technology)
- Power range 10,15, 20 kVA, space-saving design n + x technology (DSP controlled) to increase output power and/or for redundancy
- State-of-the-art: High reliability and efficiency by digital signal processing (DSP), CAN bus system, and high frequency IGBT technology.
- Uses battery systems with up to ten years battery service life, according to EUROBAT
- Communication via RS232, expansion slot for e.g. relaycard and SNMP
- 24 months warranty with pre-exchange service
- Free 36 months warranty on UPS and battery with advanced replacement service (registration required)

# Reliability

## Protect 1.M: Modular high performance UPS system

- High power reserves max. 24 kVA total output
- High safety reserves n+x technology
- Integrated static bypass switch
- 3 phase or 1 phase connection of the complete system; 1 phase output
- High autonomy time during power failure
- Manufacturer independent standard batteries
- Intelligent battery management
- Hot-swappable – easy to exchange modules
- Module design in slide-in type in the compact tower
- Communication module with LCD display, Dual monitoring interface with extension slot
- Software "CompuWatch" on CD

### Advantages

of n + x technology

- higher reliability
- easy to increase overall capacity
- modules hot-swappable (without any interruption)

Front view

### „Dual-Monitoring“-Interface

# Next-generation UPS for a new world

## Combination Architecture

Ever-tightening controls on carbon emissions. The need for ever greater computing capacity. And the challenge of controlling power costs. Always at the forefront of power innovation, AEG Power Solutions is first to recognise the growing pressure on data centres to control power consumption and increase energy efficiency. And with UPS systems accounting for a substantial part of energy used by today's facilities, we understand that optimising efficiency is a critical step forward in rising to meet these challenges.

That's why we're developing Combination Architecture® – a range of next-generation UPS systems capable of harnessing renewable and alternative energy sources and storage. By using lower carbon alternatives, our unique Combination

Architecture® systems will deliver what you need most – a way to drive down infrastructure operating costs, boost computing capacity and reduce carbon footprint to help make our world greener and cleaner.

AEG Power Solutions' Combination Architecture® includes innovative standby and power protection systems that can utilise low-impact, cost-efficient technologies as secondary sources of power, including:

- Fuel cells
- SuperCaps® (ultracapacitors)
- Solar cell and wind power energy

### The SuperCaps® Advantage

Combination Architecture® from AEG Power Solutions brings you the SuperCaps® advantage to deliver a highly effective energy storage solution for data centres and mission critical power applications. SuperCaps® (or ultracapacitors) provide an environmentally effective option for businesses that are concerned with reducing energy consumption, lowering total cost of ownership and carbon footprint.

SuperCaps® offer the functionality, life cycle costs, and reliability characteristics required for use in the power systems which ensure continuous availability. Their high power density is ideally suited to supply bridge power for short periods of around 30 to 100 seconds, while secondary generation systems come up to speed. On the other hand, battery banks are typically sized to deliver power over longer periods. In fact if sized for the actual duration required, batteries may have difficulty supplying the necessary power which often results in systems which are physically much larger than necessary. SuperCaps® operate on a different principle to batteries and are capable of holding a charge for extended periods without any loss of capacity.

Batteries, however, by virtue of their electro chemical composition, require high maintenance with cell replacement not uncommon and still present the risk of not having sufficient

capacity just when it's needed most. SuperCaps® provide fast, short-term peak power for indefinite cycles. They can be charged or discharged several times, charge instantly and have a long lifetime up to 20 years. They do not release any heat during discharge and are up to 95% efficient in application – more efficient, in fact, than conventional batteries. Additionally, SuperCaps® do not require special storage conditions and maintenance for assured operation. Their scalable and modular nature makes them an ideal solution for data centre applications. They are compact compared to batteries, and, using 3-D Flexibility® from AEG Power Solutions, they can be combined with other technologies including fuel cells to provide highly effective energy storage solutions.

Get 3-D Flexibility® and reduce the carbon footprint of your power infrastructure

Standby power protection from AEG Power Solutions adds 3-D Flexibility® to your energy storage options. Whether you choose any of our standard and modular UPS systems for your data centre, or ask us to design a custom solution to meet a specific requirement, 3-D Flexibility® gives you the option to specify how energy is stored to ensure ride through power transients. For example, you could select a super capacitor storage solution to replace or enhance a bank of batteries.

Just ask us how we can design a solution, incorporating fuel cell, SuperCap® or battery storage to help reduce the environmental impact of your facility and reduce its running costs.

# Power Safety

## Protect 3.M 2.0: Modular UPS system for medium

A technically convincing solution that is flexible to fulfill the growing requirements of modern datacenters:

- Sufficient power and security reserves
- Easy handling and low maintenance costs
- Optimal price-performance ratio

Power failures, overloads and undervoltage can lead in the worst case to loss of data. Denied access to company-critical applications almost always leads to operational disturbances, even to loss of production. Networks, workstations, intranet and internet servers, telecommunications and other company applications must therefore be available at all times and must also be protected against any disturbances to the power supply. Implementation of the VFI (double conversion) technology of AEG's Protect 3.M 2.0 protects your system reliably against all power supply problems, e.g. power failure, surges, undervoltage, voltage fluctuations, non-linear distortions, frequency fluctuations, etc.

### Modularity provides safety reserves

Protect 3.M 2.0 is an uninterruptible power supply which is highly reliable and efficient. The modular design of Protect 3.M 2.0 permits a flexible increase of the UPS power up to 480 kVA maximum with 20 kVA automatic contact hot-swap modules. This technology allows the system to be extended during operation. Modules are hot-swappable. Additional cabling is not necessary.

- Hot-swappable – easy to exchange modules
  - Simple plug & play principle for replacing modules
  - Module removal/addition during operation
  - Automatic connection, no additional cable connections necessary
- High-power reserves with a maximum total power output of 480 kVA
  - Up to 6 UPS modules with 20 kVA each can be installed in one P3.M 2.0 cabinet
  - Up to 4 UPS cabinets up to 120 kVA each can be paralleled
- Parallel Operation
 

N+X technology allows a flexible adjustment of the power capacity of your UPS at any time. At the same time the modular construction provides active parallel redundancy and thereby a high safety reservoir.

### Integrated bypass switch

- Passive redundancy by static Integrated bypass switch increases availability of the whole system during overload.
- An additional integrated manual bypass switch protects the system against operational failure and allows bypassing the UPS for maintenance.

### Intelligent monitoring

The Protect 3.M 2.0 uses an efficient communication module to collect all relevant data of the several modules over the internal network. All information are displayed clearly on the LCD for easier UPS handling.

### Battery management

As far as operation and service are concerned, intelligent monitoring via the display or system software, as well as the possibility of using standard batteries, make Protect 3.M 2.0 your preferred choice system.

- Manufacturer-independent standard batteries for initial equipment or later replacement.
- Scheduled battery test for extended battery lifecycle.
- Intelligent battery management; battery current measuring to provide useful charging & discharging data for "advanced battery management".

### Additional features

- Increased power factor (pf > 0.99)
- Less pollution (THDi < 5%)
- Higher efficiency > 94% (at 25% load)
- ECO mode (efficiency > 97%)
- IGBT technology
- Separate rectifier and dual bypass input
- Full digital control (DSP)
- PFC technology
- Load depending fan speed
- Multi-language and big LCD for user-friendly handling
- Communication via SNMP adapter and RS232/RS485 interfaces

## Protect 3.33: Online UPS system for datacenters and

### Robust and Reliable

Protect 3.33 is extremely robust, both electrically and mechanically.

It is custom-designed for use in harsh industrial environments.

The UPS offers a very high level of protection for users and connected equipment

- High intermittent overload capacity
- High level short circuit strength
- N-conductor with full loading capacity (3 phase systems)
- Excellent dynamic response can easily handle high cyclic loads

### Exact solutions engineered for each application

- Single systems
- Parallel systems
- Other input/output voltages

### Additional system equipment

- Bypass transformer
- Voltage stabilizer
- Maintenance Bypass Switch
- AC distribution panels
- Battery cubicles
- Explosion proof battery circuit breaker enclosures

### Unique Design

- Parallel operation for capacity and performance  
Flexible Multi Master Technology and CAN bus communication enables up to 8 UPS to be connected in parallel for increased power, redundancy or system upgrade.
- Parallel UPS can be operated with a central battery.
- Three microprocessor control system  
These microprocessors simultaneously monitor and control the rectifier, inverter and static switch units. This control has been specially designed to provide a problem-free power supply.

### Key features

- Full digital control
  - High reliability (no potentiometers)
  - High flexibility (software controlled parameters)
  - Fast dynamic response
- Ergonomic control unit with multilingual graphical display
- High efficiency even at low output power
  - Reduced operating costs
  - Reduced air conditioning requirements
  - Reduced battery Ah requirements
- Oversized components
  - Higher reliability and MTBF
  - High overload capacity
- Output isolation transformer
- Standardized modules
- Low maintenance
- Short circuit resistant
- More EMC robust than UPS Standard IEC 62040-2 by a factor of 2 to 3
- Redundant controls  
Separate microprocessors for Rectifier, Inverter, Static Switch and Communication
- Separate and redundant power supplies for control cards

VFI

- High protection degree (IP rating) possible  
Ready for harsh environment
- Strong mechanical design
- Remote monitoring and control capabilities (programmable)
- Capable of communicating with computer and control systems (SCADA, ESD, DCS, BMS)
  - Modbus/JBus
  - Profi bus
  - Monitoring software
  - Ethernet, SNMP ...
- System and alarm status via volt-free contacts
- Complete system  
Protect 3.33 is a true on-line double conversion UPS classified as VFI SS 111 according to IEC 62040-3.
- This outstanding UPS range features
  - On-line operation ensuring permanent service
  - Microprocessor-driven control and command system to provide reliable power supply
- A battery management system that boosts life time and cuts operating costs
- A broad range of output power ratings, battery autonomies and options to meet the needs of complex industrial applications.
- The UPS offers a very high level of protection for users and connected equipment
  - High intermittent overload capacity
  - High level short circuit strength
  - N-conductor with full loading capacity (3 phase systems)
  - Excellent dynamic response can easily handle high cyclic loads.
- Redundant and individually monitored fans
- Compatible with vented Lead Acid, Valve Regulated Lead Acid (VRLA) and Nickel Cadmium batteries
- Intelligent Battery management, test and status diagnostics
- Designed to operate with Diesel Generators
- Frequency converter operation
- EcoMode+ (as option)

# Power Safety

## Protect 4.33: Online UPS system for large datacen

### Key features:

- Highest operating safety
- Optimum efficiency, even in the partial load range
- Fully loadable neutral conductor
- Short circuit proof
- Overload capacity available
- Standardised components
- Intelligent battery charging management
- Integrated logbook function with real time clock
- Terminal emulation/VT100 via RS232
- Security thanks to internal redundancy: separate -micro-processor for control of rectifiers, inverters and -electronic bypass
- Ergonomic full graphical display for ease of operation (clear letter indication 17 diff. languages)
- Integrated network interface incl. SNMP agent for -network management (optional)
- Reliable shutdown and reboot using AEG PSS network software CompuWatch via RS232-C bridge
- Manufactured to DIN ISO 9001
- CE-compliant
- Low maintenance requirement
- Remote servicing via modem
- Comprehensive service support
- Redundant fans

### Classification VFI SS 111 according IEC/EN62040-3

The PROTECT 4. is a compact ready-to-install unit, with a maximum single unit capacity of 1000 kVA available now for the first time and opening up completely new dimensions in protection. Whether used to protect computer centres, file servers, telecommunications or industrial processes, the PROTECT 4. means additional safety and reliability for your systems.

### Environmentally friendly

The PROTECT 4. offers the highest reliability with efficient modern technology and 12 pulse rectifier for sinusoidal input current consumption to DIN 41773. Thanks to its excellent efficiency level of up to 94 %, up to 8000 € can be saved per year in every day online use.

Increased power and reliability through parallel operation

The PROTECT 4. can be used in parallel operation with up to 8 units. This increases the power capacity, or allows for even greater safety via N+1 redundancy.

### Unique control capability with three custom microprocessors

A key feature of the unit's design are the three control microprocessors.

These were specially developed by AEG PS for use in UPS. They monitor and control the rectifier, inverter and static switch units simultaneously.

# ters and internet nodes

Type power at cos $\varphi$ 0,8 lag. in kVA	160	220	300	400	500	600	800	1000
---	-----	-----	-----	-----	-----	-----	-----	------

## Software solutions

### „CompuWatch“ – the Shutdown- and UPS management software

... for automation in data processing.

Based on the TCP/IP network protocol, CompuWatch is applicable to heterogeneous networks where servers and computer systems with diverse operating systems require a safe (i.e. where all open files are closed) and automatic shutdown process for particular situations. It carries out its functions by passing information through security mechanisms to all UPS protected servers and computer systems by way of an intelligent UPS-to-server communications interface as well as the existing network topology. Appropriate software modules in these servers and computer systems make it possible for them to react accordingly. A terraced shutdown sequence can be achieved by configuring these software modules on the affected servers. All CompuWatch modules run as service or background processes. Individual procedures can be launched by a shell script or batch programming techniques.

The CompuWatch client, a graphic front-end for all Microsoft Windows operating systems, permits all UPS systems connected to the network to be monitored and controlled. Aside from this, a scheduler can also be used to control the entire network. Products from AEG Power Solutions provide a total security solution for network power from a single source: the Total Network Security Solution.

### Total Network Security Solution

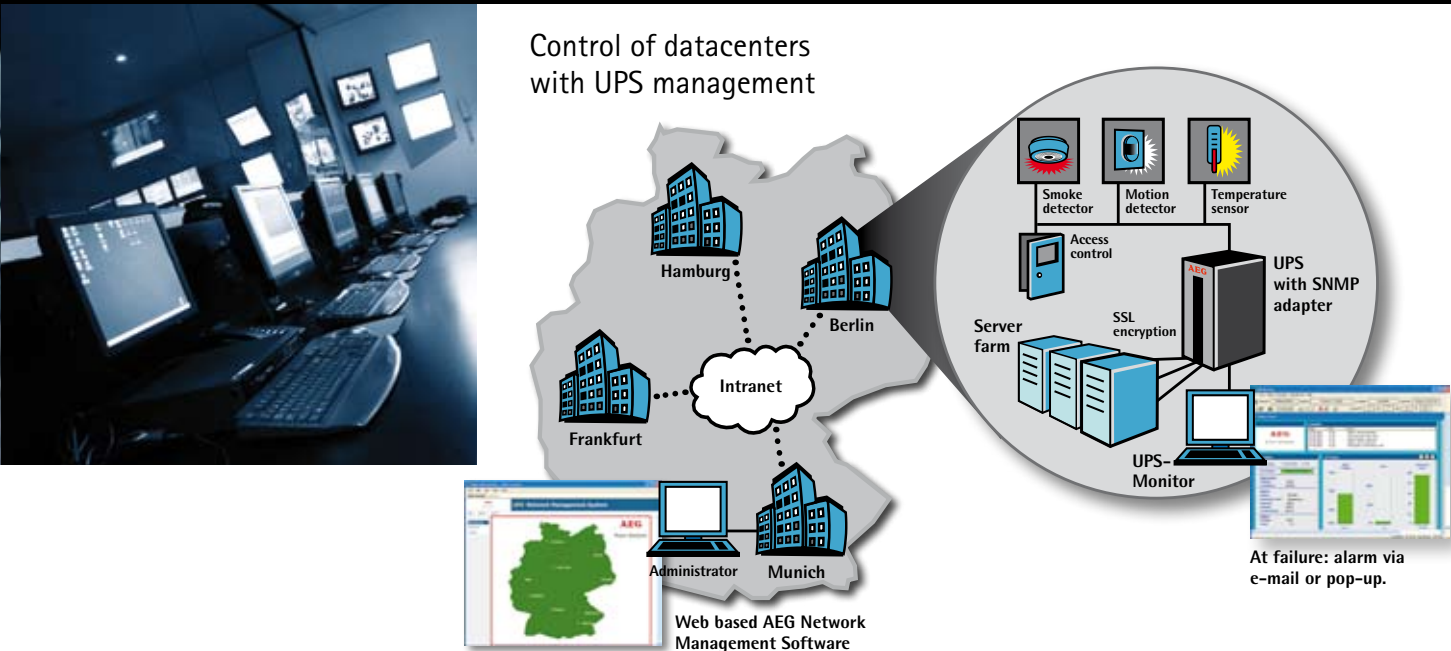

#### Special features:

- Software in client/server technology
- Integration as a background process
- Supports multi-server shutdown in homogeneous and heterogeneous networks
- System activities can be programmed via scheduler and configured by event manager
- Monitoring UPS devices locally and remotely via network
- Selectable bar graphs for measured values
- Support of the wake-up-on-LAN function for sequential reboot
- Customizable batch files and scripts for the shutdown procedure
- Alerting of events via network messages, e-mails and SMS
- SSL encryption for multi-server shutdown
- Logging of all events in a log file
- Visit [www.aegpartnernet.com](http://www.aegpartnernet.com) for an overview about all supported operating systems

#### Example:

The Figure illustrates a heterogeneous network with a Windows NT server configured as the master and various slave servers that have other operating systems. The potential to implement the automation of shutdown and reboot procedures for the entire network, including the UPS, is inherent to these products. This means that during a power outage of long duration the entire data net can be safely shut down and turned off; the Shutdown function. Following a specified delay after power has been restored, the network will also be automatically restarted and systems will be initialised; the Reboot function.

## Network management for UPS devices

... a solution for intelligent network management.

The network management software for UPS devices allows an easy control of many UPS devices even in disturbed networks. It gives the administrator an overview about all installed UPS devices and shows the actual status of the several locations. This increases the security and availability and allows a centralized administration.

The software sends an alert e.g. by email whenever a problem occurs. The network management software is supported by every common web browser and gives the necessary flexibility in administrating larger networks. UPS status information, log history and reports can be viewed everywhere via web browser.

### Special features:

- Web-based remote monitoring of power supply systems in the network
- Simple operation of a complex power supply management system
- Alerting of events via network messages, emails, Short Message Services (SMS)
- Storage of all events in a logbook
- Graphics for statistical analysis
- Customized presentations with background graphics are possible

A free basic version of the software is available for up to nine UPS devices on the "CompuWatch"-CD.

## Integrated solution of UPS management

The combination of network management software for remote control and the UPS management software "CompuWatch" offers an integrated solution for administration of several datacenters. With the optional sensors shutdown processes can be automated whenever there are problems in the datacenter environment. An SSL encrypted communication between the UPS and server secures against unauthorized access.

### Special features:

- Environmental control by sensors like temperature, humidity, smoke and motion detectors
- Secured communication between UPS and server by SSL encryption
- Local alerts by actuators like warning light or audible alarm
- Alerts via network messages, emails oder SMS
- Complete automated server management via programmable actions

# Ease of use

## Hardware: Extensions & accessories

### Remote Panel

#### Remote signal indicator for professional datacenter management

The remote panel displays remote UPS status in real time. An additional bar graph shows the current UPS load and remaining capacity in emergency power mode. Besides the visual indicators, the panel has an acoustic alarm (which can be disabled), plus a shutdown contact to enable a remote UPS shutdown in the event of an emergency. The remote panel can be installed at a distance of up to 500 meters. Data and power are supplied to the remote panel over a conventional patch cable. The remote panel is available for Protect C. Tower (6 kVA and higher), Protect 1. and Protect 1.M UPS units.

### Power distribution units

#### Power distribution for professional datacenters

These power distribution units are designed to distribute power from UPS outlets to multiple connected loads. Various models are available with a choice of grounded IEC320 C13 and C19 sockets for connecting equipment. The sockets are protected against overloading, either individually or in pairs, depending on the connector type. The connection options provide an effective means of defining selection criteria to meet required power-down conditions. LEDs indicate the current operating state. Thanks to slot-in rack flanges, the PDUs are easy to install in a standard rack chassis. For flexibility, the flanges can be removed for desktop use. The PDUs have robust aluminum enclosures offering exceptional rigidity and durability.

#### Part numbers

Remote Panel # 600 000 5881

PDU 10-1 # 600 000 6684

PDU 16-1 # 600 000 6829

PDU 10-2 # 600 000 6831

PDU 16-2 # 600 000 6832

IEC Distribution Bar # 600 000 9254

## Manual Bypass Switch

### Manual bypass switch for maintenance and battery tests

The external manual bypass switch, an optional add-on for the Protect B., B. PRO, C., C.R, D., 1. and 1.M series of UPS systems, is used to bypass a UPS – for example, to carry out maintenance – without interrupting the supply of power to connected loads. Besides simple bypass operation, it features an additional setting to enable UPS testing. The switch is equipped with individually protected power connectors to supply power to loads directly.

The external manual bypass switch has three settings:

1. UPS mode: Loads are supplied with power via the UPS.
2. Service mode: Connected loads are powered directly from the mains supply. This setting also enables the UPS to be tested.
3. Bypass mode: In this mode, loads are powered directly from the mains supply. The attached UPS is fully disconnected from the circuit and can be removed for maintenance or replacement.

MBS 2000 # 600 000 3039

MBS 3000 # 600 000 3040

MBS 6000 Rack # 600 000 5205

MBS 10000 # 600 000 7684

MBS 24000 # 100 000 2021

## Power Distribution Box

### Parallel board, manual bypass and distribution

With the compact parallel switch panel, users can set up a parallel system comprising up to three Protect C.6000 / C.10000 or up to three Protect 1.100 / 1.150 or 1.200 units without needing to restructure an existing low-voltage main distribution system. Combining up to 24 separately protected, ready-made circuits in an output distribution unit built into a parallel switch panel, the PDB box eliminates the need to set up or reorganize a sub-distribution system.

Offering active redundancy and designed for use with the Protect C. range of single-phase UPS units (up to 30 kVA or 20 kVA) and the Protect 1. range of three-phase-input UPS units (up to 60 kVA or 40 kVA), the switch panel allows users to connect devices in parallel for enhanced performance and single or multiple redundancy. Each UPS unit can be disconnected – from the mains supply on the input side and from the protected busbar – without interrupting the supply of power to connected loads. In addition, the manual bypass can disconnect the entire parallel UPS system – for maintenance, for example – without cutting power to attached devices. A remote signaling contact indicates the current operating status.

PDB for Protect C. # 100 000 1852

PDB for Protect 1. # 100 000 1853

## Communication: Extensions & accessories

Relay card

Communication device for AS / 400

This relay card is an option for UPS series Protect B./B. PRO/C./C.R/D./1. and 1.M and enables the communication via potential free contacts. The contacts can be configured as open and shut. The status notifications will be transmitted by a 9 pin Sub-D socket. The relay cards are optimized for the IBM AS400 but can also be used for other applications.

SiteManager

Network based UPS management device

The SiteManager is a professional-grade monitoring system. The 19" rack unit can be used to monitor equipment cabinets and rooms as well as industrial applications. With its plug-and-play support for a range of sensors and actuators, the SiteManager is exceptionally quick and easy to install. It has eight digital ports that accept an extensive range of contact sensors, including smoke detectors, motion detectors and door contacts. It additionally includes eight inputs for analog signals (0-10V). Each input is individually configurable to support everything from temperature and humidity sensors to custom sensor devices. There are also eight separate relay outputs for controlling loads. These outputs can be controlled either manually by users or automatically in response to defined events. All alarm states are indicated on the front panel by light-emitting diodes. The electrical connections are located on the monitoring unit's rear panel.

Part numbers	Relay card for Protect B. from 1500 VA # 600 000 5196
	Relay card for Protect C. / C.R / 1. / 1.M # 600 000 3932
	Relay card for Protect B. PRO # 600 000 9252
	Relay card for Protect D. # 600 000 9253

SiteManager # 600 000 7349
Temperature sensor # 800 002 2489
Smoke detector # 800 002 2495
Motion detector # 800 002 2494
Audible alarm # 600 000 7361

## Environment Manager

Management device for several environment sensors

The Environment Manager is a universal sensor management device designed as a system add-on for the SNMP PRO Adapter. It can manage up to eight analog sensors, four digital contacts and four digital switches simultaneously. The device can also work with other kinds of sensor units – for humidity, pressure, tank fill levels and chemical concentrations, for example – provided the signal voltages from the attached sensors are within defined values (0-10V for analog inputs, 48V/500mA for digital inputs/outputs). The digital outputs can be configured for a default state of open or closed. Sensors are simply connected to a free RJ11 port. If more than four sensor devices need to be attached, sensors are available that are equipped with an expansion connector, allowing multiple sensors to be connected to one another. If all the RJ11 ports are occupied, splitters can be used to provide additional ports.

- Environment Manager # 800 002 2488
- Temperature sensor # 800 002 2489
- Motion detector # 800 002 2494
- Smoke detector # 800 002 2495
- Audible alarm # 600 000 7361

## SNMP(pro) Adapter

UPS management device via network

Available in two versions, the SNMP adapter enables users to monitor the status of UPS units via the Web or WAP. It can also initiate a staggered shutdown of key servers if the need arises, and can restart the servers via wake-on-LAN, providing automatic system shutdown and reboot capabilities. In addition to these features, the adapter has an integrated RFC1628-compliant SNMP agent, allowing the UPS to be configured and monitored in HP OpenView, SunNet Manager or other network management software. The PRO version of the SNMP adapter can additionally incorporate room access control, air-conditioning, and smoke and fire detector systems. In combination with the EnvironmentManager, the SNMP PRO Adapter is even capable of processing temperature and humidity sensor data.

- SNMP adapter # 600 000 4036
- SNMPpro adapter # 600 000 1271
- External SNMPpro adapter # 800 000 9965
- Temperature sensor # 800 002 0878
- External relay board # 600 000 5994

## Service: Your Power Partner for reliability

**„Only a professionally serviced and maintained UPS offers the highest possible availability with effective cost control.“**

Based on our high standards and decades of experience, we are also cost-effective, efficient and rapid when it comes to servicing. Pro-Care Comfort Maintenance service for PROTECT C, 1 and 1.M. Can be ordered as a service package at any time.

For the first 24 months after the initial purchase we provide a comprehensive advanced replacement service for the device and battery from the Compact UPS series (Protect Home. / A. / B. / B. PRO / C. / C. Rack / D. / 1. / 1.M). Additional service packages, which address all of the user's needs, are available when purchasing the UPS. These packages ensure optimal cost control over a period of up to 60 months.

The following service packages are available:

### Pro-Care Garant

Register your UPS within two months from date of purchase and you will get the warranty extension "Pro-Care Garant" for free. So we provide an overall warranty for 36 months on UPS and battery.

The registration form is available at [www.aegpartner.net](http://www.aegpartner.net)

### Pro-Care Garant PLUS

Warranty extension to 60 months from the date of purchase with advanced replacement of the UPS within the warranty period. This can be optionally arranged during the first year after purchase.

Available for the Protect C. / C. Rack / D. / 1. and 1.M series.

Repairs and individual service measures available on request!

## Rely on the experts to reduce failure costs and increase system availability

Because AEG Power Solutions is a world class system provider, you can rely on a global network of 20 Services Centers supported by over 150 field engineers and more than 100 certified service partners around the world. From power solution selection to process installation and commissioning, our certified experts exceed your expectations. Their excellent service helps you achieve the lowest operating cost for your mission-critical power solution. A Global Service Team renowned for its short response time and trouble shooting efficiency ensures the reliability of your installed power solution.
